

#### Night-time Land Surface Temperature (LST) anomaly (°C)

##### Città Metropolitana di Milano

Night-time Land Surface Temperature (LST) anomaly over the Urban Heat Island of Milan extracted from AQUA night passes (between 01:00 and 03:00) during summer heatwaves from 2015 through 2018. AQUA LSTs at 1km per pixel have been downscaled at the nominal spatial resolution of 30m by using night-time LANDSAT-8 thermal maps.

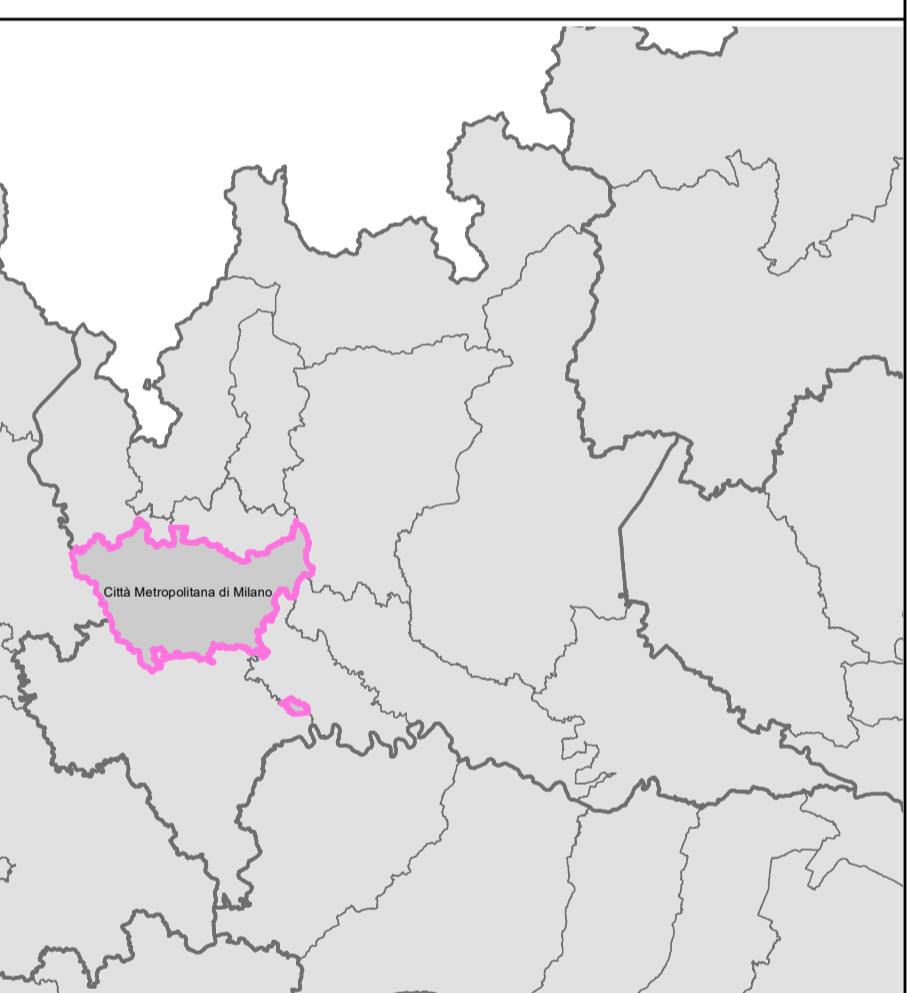

Updated to the latest DBT release (2017).
